

C-Note

Progress Note System

Inherit and Evolve from the Paper-Based Medical Records

C-Note is an Progress Note System with providing an paper-based interface which solves the following problems.

- Departments which conduct many examinations that records images and numeric values
- Departments which having a hard time using the default functions in the common EMR system and desire to have more functionalities in EMR.

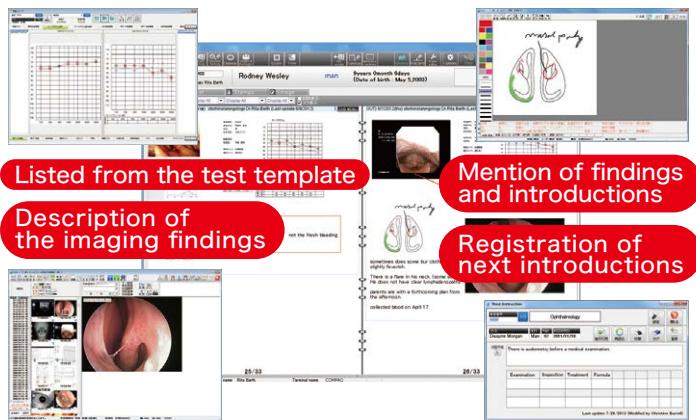

The system will provide you the following effects.

- Writability as if you are writing on the paper
- Browsability of archive articles
- Easy transcription

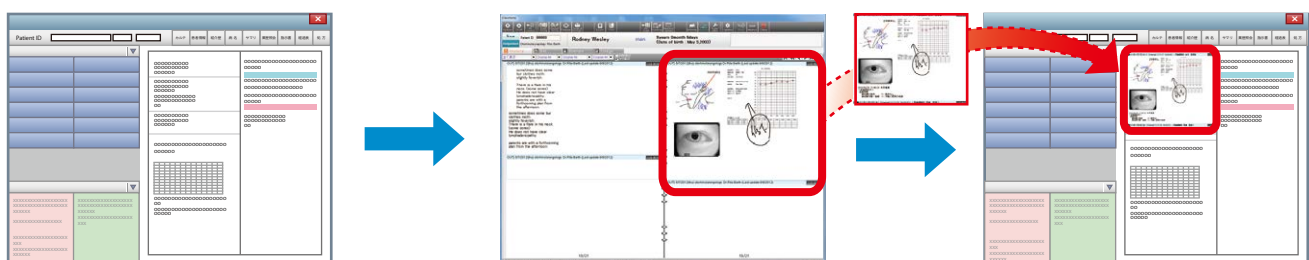

C-Note is the system that focusing on only the good points of paper-based medical record and electronic medical records that provide users more efficient medical record keeping.

Medical Record Keeping

We provide you variety kinds of input tool. You can keep records on anywhere you want. You can also change the size and color to emphasize your recording.

Sample Flow of Hospital Information System (HIS) Cooperation

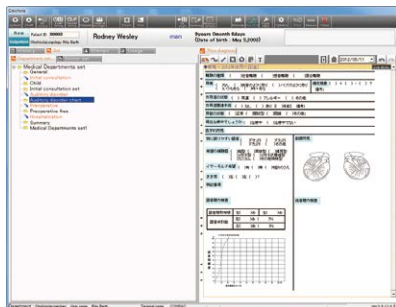

1. C-Note and Claio will be launched from HIS. The target patient will be displayed initially on a monitor.

2. Once you complete recordkeeping, the records will be saved as pictures and will be sent to HIS.

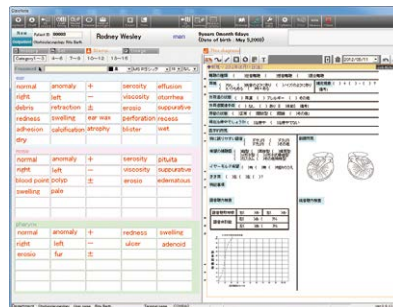

3. The send picture will be displayed on the HIS monitor.

Record Keeping Templates

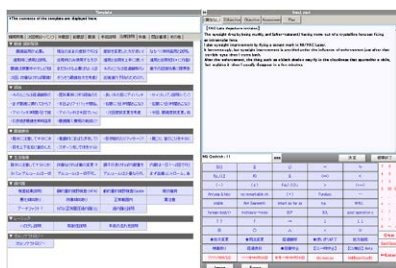

C-Note is capable of registering the medical record template. The user shall be able to start record keeping using templates.

Stamps

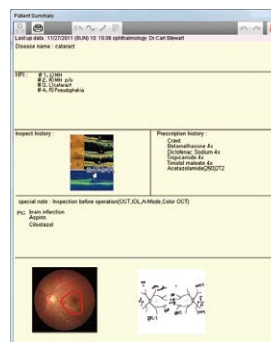

C-Note is capable of registering word and phrase as stamps. The user shall be able to keep records using only drag and drop action.

Custom Word Templates

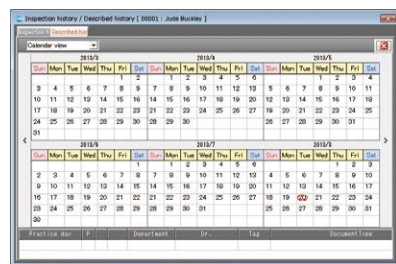

C-Note is capable of registering word and phrase as templates. The user shall be able to input texts using only click action. The system may have two configurations. (The user level configuration and the department level configuration)

Patient Summary

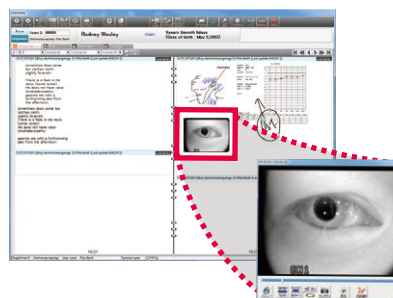

C-Note is capable of creating the clinical summary for each patient. In the summary, you will have records (images, numeric values and texts) of past examination.

Displaying Medical History

C-Note is capable of displaying data of patient's medical history in multi-view format. The system can display in calendar-view, list-view and thumbnail-view.

Cooperation with Claiο

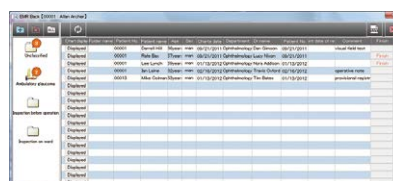

C-Note is capable of showing the original image with Claiο. If the selected image is tagged with video, then a video will start playing automatically.

Surgery Information Management

C-Note is capable of displaying the days that passed from surgery day.

Archiving Medical Records
