

Findex Providing GE Healthcare Japan with ODM Services for Radiation Solutions

In order to more actively develop and promote Radiation solutions, Findex Inc. has agreed to provide GE Healthcare Japan Corp. with Original Design Manufacturing (ODM) services for its products, including Radiation department systems and Radiation reporting systems.

Note

1. ODM service start date:

Findex Inc. will begin providing ODM services on April 15, 2016, gradually adding more products thereafter.

2. ODM products:

- (1) Radiology department system: Radiology Information System (RIS)
- (2) Radiology reporting system
- (3) Scanned image control software
- (4) Digital camera control software
- (5) DICOM gateway software
- (6) General-purpose image XDS gateway software
- (7) Scanned image guideline-compatible software

3. Expected qualitative effects:

Learning how to use products used in radiation therapy in combination with products used in non-radiation therapy is a serious challenge for any medical institution. We believe that the two companies, each with advantages in its own area, will be able to work together to provide customers with total solutions that are easier to use.

4. Expected quantitative effects:

No revisions will be made to the forecast of our financial results as a result of this announcement.

5. Other:

At the International Technical Exhibition of Medical Imaging 2016 (ITEM 2016) to be held from April 15 to 17, 2016, an announcement and presentation on the products will be made at the GE Healthcare Booth.
